

Summer Internship Programme

Summer Internship an integral part of the curriculum at NICMAR, serves as an excellent platform for the students to apply their academic learnings through hands-on Industrial exposure. Positioned between the first and second year of the course, the programme is most effective in widening the students' perspective by providing an insight into real life organisational situations. It gives the students an exposure to the business world and practices, and an opportunity to apply concepts to practical problems. It also helps students develop in the fields of analysis, interpretation and in reaching meaningful inferences.

During this period, students have to undergo supervised field training with a reputed organisation for a minimum duration of 8 (eight) weeks. This enables the students to carry out applied research in the area of projects & management. This process is mutually beneficial for both, the students and the organizations, wherein the students gain practical experience and the organizations get quality research and fresh perspectives.

Summer Internships provide the companies with the opportunity to evaluate students' candidature for future employment. Impressed by excellent performance of NICMAR students during summer internships, many leading firms have expressed their keen interest in absorbing them into their organizations through Pre- Placement Offers.
